

CSMT is about to experience India's first augmented reality rail station

This time the train passengers are going to experience augmented reality (A.R.). Similarly, Chhatrapati Shivaji Maharaj Terminus (CSMT), the busiest railway station in the commercial city of Mumbai, has emerged as the first railway station in the country to have an A.R. As a result, passengers will be able to travel around the world standing in front of the magic mirror. Passengers can enjoy the experience of seeing forests, snowfalls, and various animals. It will also allow passengers to get a real-time digitized timetable with a dedicated scrolling screen and train information for an exciting experience. A virtual world will be created around the passengers standing in front of this magic screen. Its main goal is to introduce passengers to new technologies and generate revenue for the railways by providing entertainment.
